

# Report for Week #4

Iron Man Planner

Group: 2

Date: 2/13/2025

Location: Cline Library room 240

Present participants: Dorian, Cole, Daniel, Travian (Manager), Jesse (Presenter), James (Reporter)

Missing participants: None

Project repo: <https://github.com/Oracle451/Personal-Planner>

## 1. Activity Summary

Describe what each individual has contributed to the project in the last week. Provide some supporting documentation (e.g., an issue number, commit id, corresponding meeting date, etc.). If someone didn't do anything, please be honest and explain why.

**Activity that advances your project toward completion is expected every week and should be reflected in your Git repository!**

### Jesse

- Theme selector is created, allowing users to choose how their page looks (Commit 0da328708af08bab7d4c7df64ee71ffe3b120a89)
- Bug fixes for theme selector after HTML was changed (Commit 0b0dc971d93e643ca185e7996476dd55bb6cb51a)

### Cole

- Implemented various visual changes (changed header and footer text, added an icon to the webpage, and added "highest streak" counter to the streak UI) (Commit 153fc4e8259efd9bd1b8cfb643e41c792216e7cd)
- Updated features and contribute sections in the readme file, (Commit ce2d4d0abe5d5af3be3208ec184a4e593133f3e7)

### Dorian

- Did nothing, the calendar was updated before I could get to it
- 

### Travian

- Updated CSS file to fit the theme I came up with last week. Tried to match the my design with the website (Commit 0172fa22e3ee44a6e91b8bb2cf0373dc7d537691)
- Came up with a priority document for what needs to be implemented

### **Daniel**

- Added a streak counter with “Good, Decent, and Bad” options for user’s daily assessment of themselves. This is available on a popup window when clicking on the calendar (Commit bf0cd446332268eae3ad036dc7aa831e392c0828)
- Adjusted the layout of the website to clean up some areas as well as better fit it to our initial plan. Also added a new color scheme called “Bubble Gum” to test functionality for future additions. (Commit 41171111ba277424d009b7ecf991c74d2c206a49)
- Added a feature for the user to count their daily caloric intake that is on the same popup as the day rating. Planning on adding future implementations where the user can see this data from the home screen. (Commit 655feb961fb62b67ce8062a4ee4592464ff1a8ff)

### **James**

- Updated the calorie count display on a given calendar day. Changes to enhance user interface. (Commit 5a34ac4afa1d4c1df7771fbbf827321c51c925d6)

## **2. Retrospective**

In your weekly meeting, you should spend a few minutes discussing how the group is functioning. What aspects of the group dynamics contribute to the success of the project? In addition, raise any issues—best done directly but with humor and kindness—that you believe are interfering with the effectiveness of the group and your ability to complete the project on time.

The retrospective should be an open and safe space for the team to reflect on and discuss what works well (and what doesn't!) so you can improve. Don't make it personal, and don't take it personally. Be open to criticism and offer constructive and polite critiques. Focus on how to improve the quality of your team and the product you are developing.

1. **Appreciations:** Jesse really took initiative when it came to adding features and functionality that the team was talking about adding. By implementing the structure of these features now, it will be much easier to build on them later on.

2. **Success:** Our vision for this project has come a long way since the last deliverable, we now have a clear idea of what features to implement and we have already begun work on creating rough mockups in the code.
3. **Failures:** A lack of clear roles for each team member (having someone to lead UI, someone to lead Javascript, and someone to lead feature design).
4. **Barriers:** While our plan for features has become more refined, we still each have a slightly different idea for precise implementation leading to overwriting each other's changes.
5. **What we should try next time:** We will aim to have a more unified plan for implementation of our features to ensure that everyone is working towards the same end goal without room for misinterpretation.

### 3. Next steps

Think about what needs to be done and assign tasks. Update your activity management system with new tasks, actual hours spent in the activities, and corresponding GitHub issues. Summarize these tasks here.

#### **Jesse**

- Attempt to create task creation methods, allow them to be added to day, save in cookies.

#### **Cole**

- Confirm design layout mock ups as a group
- Discuss exact functionality of our planned features (How should streaks be handled, how to let the user input calories, how to let users set their daily calorie intake...)

#### **Dorian**

- Correct calendar design to have days and before and after days from current month
- 

#### **Travian**

- Implement feature priority into GitHub issues
- Make 5 themes for theme selector/ update theme selector to incorporate other css items.

#### **Daniel**

- After confirmation of the roles that will be assigned to each of us, I plan to focus on my role specifically and inquire of other teammates to help verify that the items I am working on are good.

- Work to further the current state of the calorie tracker and daily goals. Potentially initialize the code for other useful tracking functionalities.

**James**

- To improve the commit so that calorie counts within the app are saved and loaded correctly. Try to make it so the program can save calorie count data whenever the site is refreshed or closed.
